

Ethanol:

- An advanced, homegrown biofuel that is already in **97 percent** of U.S. gasoline and is moving America forward every day.
 - Today, drivers across the country have a better, more affordable choice at the pump - **E15** (gasoline blended with 15 percent ethanol).
 - Gas stations across the U.S. **already sell E15** and more consumers are getting access to this super fuel every day.
-

What you put in your car matters.

Choose E15.

Find your station here: GetEthanol.com

Ethanol is good for our engines, environment & wallets

Good for our engines:

- E15 is a high-performance fuel that increases horsepower while burning cleaner and cooler than regular gasoline.
- Any car 2001 or newer can benefit from using E15 – that's nearly nine out of 10 cars on the road today.
- NASCAR mechanics, automakers and regulators all agree – E15 is a safe, affordable, green choice for engines.

Good for our environment:

- Ethanol replaces toxic chemicals in gasoline known to cause cancer and smog.
- Ethanol is an earth-friendly biofuel that decreases greenhouse gas emissions. Each year, global ethanol production and use is estimated to reduce carbon emissions by an amount equal to removing nearly 20 million cars from the road.

Good for your wallet:

- Ethanol keeps the prices at the pump lower, saving 5-10 cents on average per gallon.
- Ethanol decreases our dependence on oil from hostile nations.
- Ethanol supports nearly 400,000 high-tech, American jobs, and moving to E15 will create another 136,000.

Ethanol is a great American success story and you are an important part of it.

Tell your story today.
