

Power Steering

BG Power Steering Service

**Quiets & Smooths Steering!
Protects Expensive Components!**

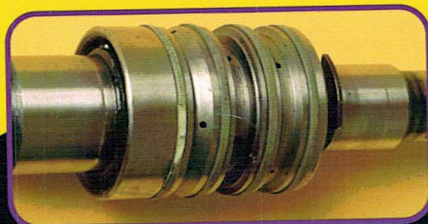

Ask your Service Advisor
for a BG Power Steering Service.

BG Power Steering Service helps avoid costly repairs.

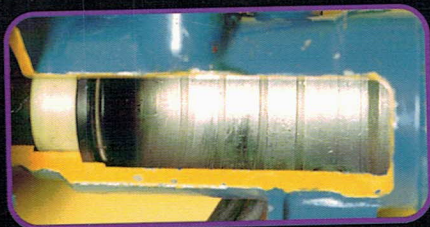

The power steering pump puts out up to 2000 psi and has no drain plug to drain worn out fluid. Under extreme conditions of heat and pressure, fluid wears out. Fluid contamination is the chief cause of premature wear in the power steering system. Oxidation byproducts, hose material and metallic debris accumulate in the fluid. As contaminated fluid is pumped through the system under extreme pressure, it causes abrasive wear in the pump and rack assembly. This leads to pump noise, erratic steering—especially when the system is cold—and ultimately, mechanical failure.

The cure is the BG Power Steering Service, which uses a safe, effective cleaner to dissolve and suspend varnish, deposits and debris from seals and parts. The old, contaminated fluid is removed and replaced with power steering fluid that is specially formulated to reduce heat and friction while protecting vital system parts.

*Power steering
spool valve
with hardened,
cracked seals.*

*Grooves are worn
into the soft metal
of the spool valve
housing by
hardened seals.*

BG Power Steering Service should be performed every
30,000 miles/50,000 km to avoid costly repairs.

Ask your Service Advisor for a BG Power Steering Service.

Lifetime
BG Protection Plan

With a BG Power Steering Service, your vehicle may be eligible for Lifetime BG Protection Plan coverage up to \$4,000. Ask your Service Advisor for details.
